Nephrology Clinical Solutions Establishes NCS Research Council to Explore Care Delivery Improvements

Lisle, IL, January 22, 2013 – Nephrology Clinical Solutions announced today the launch of the NCS Research Council, designed to bring together healthcare professionals willing to dialogue about ideas that could potentially transform our current practice and improve the care received by patients with chronic kidney disease.

NCS Research is establishing a Council of nephrology professionals with experience and expertise in various areas of chronic kidney disease (CKD). The goal of the NCS Research Council is to stimulate thinking and explore unique approaches to the care and treatment of patients with CKD. We believe that improvement in the care and treatment of patients with CKD can be achieved by bringing together healthcare professionals willing to discuss barriers that limit progress as well as exchange ideas that could potentially transform our current practice.

Alex Yang, MD, NCS Research Director, states, “With the constantly changing practice landscape, it is more important than ever to quickly address the challenges in caring for these patients. NCS Research provides forums to bring healthcare professionals together to dialogue on an ongoing basis.”
